

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-20 (Canceled).

Claim 21 (Currently Amended): ~~An information storage medium~~ A disc-shaped manufacture configured to have data recorded thereon and data reproduced therefrom by an information recording/reproducing apparatus, said ~~medium~~ disc-shaped manufacture having a lead-in area, a lead-out area, a data area defined between said lead-in and lead-out areas, a management area, separate from said data area, for managing at least one data object recorded in said data area, and having sectors for said data area, wherein,

said data area is configured to record the data object with ECC blocks, said data object being able to include video or audio information, the ECC blocks are used as address information of the data area,

a prescribed address corresponding to an integer multiple of said sectors is defined,
said prescribed address is configured based on a unit including data of 2048 bytes,
said management area includes a real time recording video manager, wherein said real time recording video manager contains a movie AV file information table comprising movie AV file information, wherein said movie AV file information contains one or more pieces of video object information,

said video object information includes prescribed information indicating whether an audio gap exists in a specific video object unit, said audio gap being a portion at which audio reproduction is discontinued for video playback of that portion,

said apparatus is configured to detect an audio gap based on the prescribed information, and

said information recording/reproducing apparatus accesses said data area.

Claims 22-28 (Canceled).

Claim 29 (Currently Amended). ~~An information storage medium~~ A disc-shaped manufacture configured to have data recorded thereon and data reproduced therefrom by an information recording/reproducing apparatus, said data including control information and video object data, said data forming a plurality of error correction code blocks, wherein a predetermined number of sectors constitute each error correction code block, and each of said sectors has a predetermined size, the ~~information storage medium~~ disc-shaped manufacture comprising:

- a data area configured to store the video object data; and

- a control information recording area configured to store said control information, the control information being configured to manage the video object data and including an AV file information table having a first table area configured to store object stream information, and a second table area configured to store AV file information configured to manage information of the video object data, the AV file information including a plurality of object information, each said object information including information of a video object of the video object data, and a plurality of object information search pointers associated with the plurality of object information, wherein:

- said video object data is configured to be recorded in at least one said video object,

- an error correction code block address being defined in units of the error correction code block is used as address information of the data area, and

- said object information includes prescribed information indicating whether an audio gap exists in a specific video object unit, said audio gap being a portion at which audio reproduction is discontinued for video playback of that portion, wherein

said apparatus is configured to detect an audio gap based on the prescribed information.

Claim 30 (Currently Amended): An information recording method for recording information on an information storage medium that includes,

a data area configured to store the video object data; and

a control information recording area configured to store said control information, the control information being configured to manage the video object data and including an AV file information table having a first table area configured to store object stream information, and a second table area configured to store AV file information configured to manage information of the video object data, the AV file information including a plurality of object information, each said object information including information of a video object of the video object data, and a plurality of object information search pointers associated with the plurality of object information, wherein:

said video object data is configured to be recorded in at least one said video object, an error correction code block address being defined in units of the error correction code block is used as address information of the data area, and

said object information includes prescribed information indicating whether an audio gap exists in a specific video object unit, said audio gap being a portion at which audio reproduction is discontinued for video playback of that portion,

the information recording method comprising:

~~recording the object unit into the data area~~

generating the video object data;

recording the generated video object data in the data area;

generating the control information; and

recording the generated control information in the control information recording area.

Claim 31 (Currently Amended): An information reproducing method for reproducing information recorded on an information storage medium that includes,

a data area ~~configured to store~~ storing the video object data; and

a control information recording area ~~configured to store~~ storing said control information, the control information being configured to manage the video object data and including an AV file information table having a first table area configured to store object stream information, and a second table area configured to store AV file information configured to manage information of the video object data, the AV file information including a plurality of object information, each said object information including information of a video object of the video object data, and a plurality of object information search pointers associated with the plurality of object information, wherein:

said video object data is configured to be recorded in at least one said video object, an error correction code block address being defined in units of the error correction code block is used as address information of the data area, and

said object information includes prescribed information indicating whether an audio gap exists in a specific video object unit, said audio gap being a portion at which audio reproduction is discontinued for video playback of that portion,

the information reproducing method comprising:

~~reproducing video data or audio data~~ the control information; and

reproducing the video data or audio data based on the reproduced control information.

Claim 32 (Currently Amended): An information reproducing apparatus for reproducing information recorded on an information storage medium that includes,

a data area ~~configured to store~~ storing the video object data; and
a control information recording area ~~configured to store~~ storing said control information, the control information being configured to manage the video object data and including an AV file information table having a first table area configured to store object stream information, and a second table area configured to store AV file information configured to manage information of the video object data, the AV file information including a plurality of object information, each said object information including information of a video object of the video object data, and a plurality of object information search pointers associated with the plurality of object information, wherein:

said video object data is configured to be recorded in at least one said video object, an error correction code block address being defined in units of the error correction code block is used as address information of the data area, and

said object information includes prescribed information indicating whether an audio gap exists in a specific video object unit, said audio gap being a portion at which audio reproduction is discontinued for video playback of that portion,

the information reproducing apparatus comprising:

~~a reproducer configured to reproduce video data or audio data~~

a first reproducer for reproducing the control information; and

a second reproducer for reproducing the video data or audio data based on the reproduced control information.
